The 50% Problem

A Deep Dive into Company X's Warranty Performance

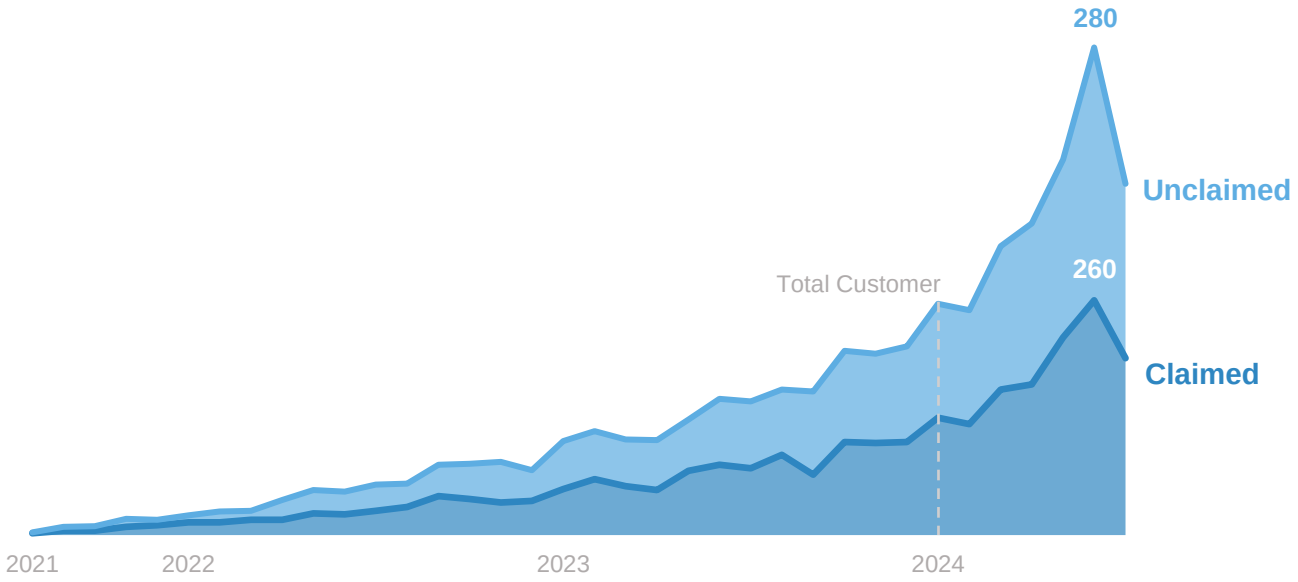
Renzo P. Alporha

Executive Summary

- The **warranty program** ran across cities with **no analysis** and no clear picture of its performance.
- **High claim rates**, yet **no deeper visibility** into where the program truly stands.
- **Early product failures** suggest the issue may lie **beyond** cities, potentially in product quality.
- A **deeper investigation** into **product quality** and **manufacturing** could reveal what's truly driving high claim rates.

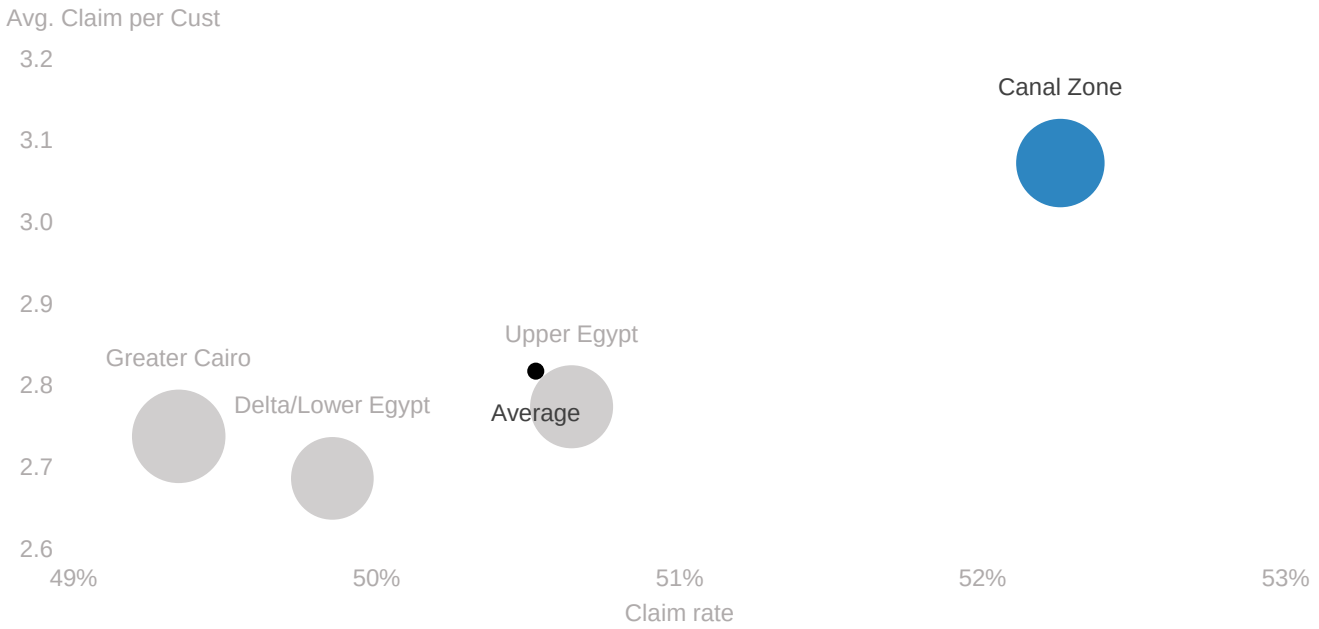
50% Warranty Claim Rate: A Retention Risk Hiding in Plain Sight

Warranty claims are growing with the customer base, and without understanding why, they'll keep dragging on growth.



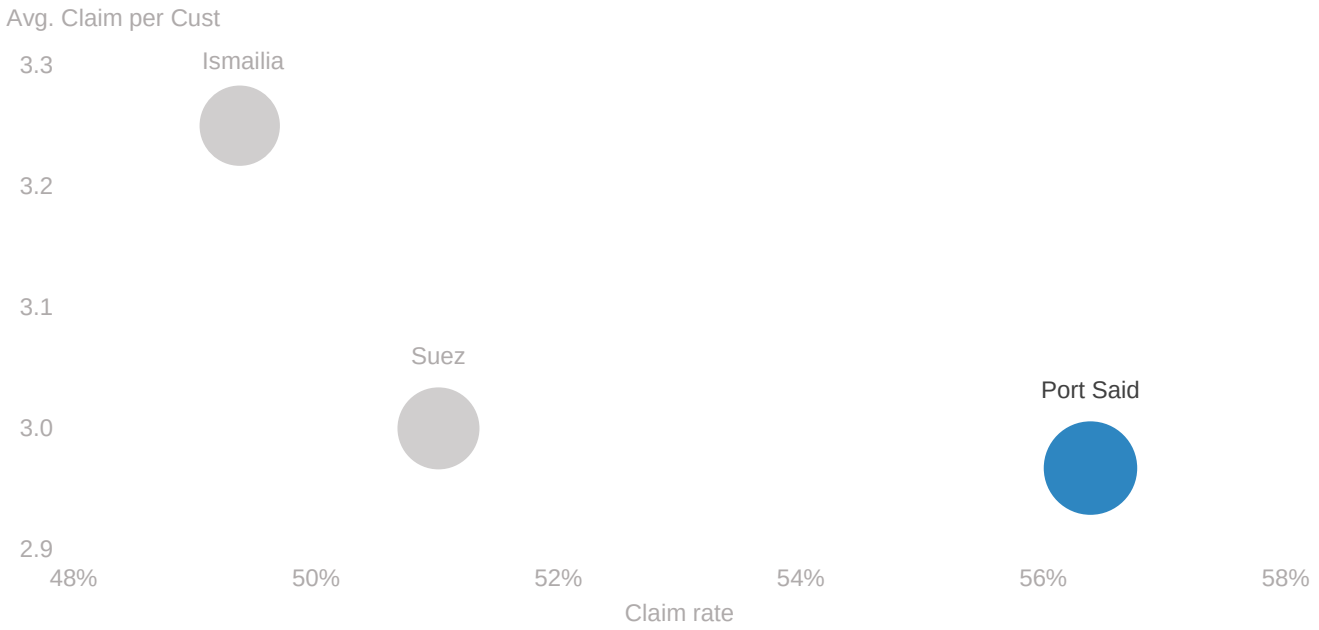
Out of all Region, Canal Zone Leads Highest in Claim Rate…

Canal Zone rises above all regions and the average, but the real story is still beneath the surface.



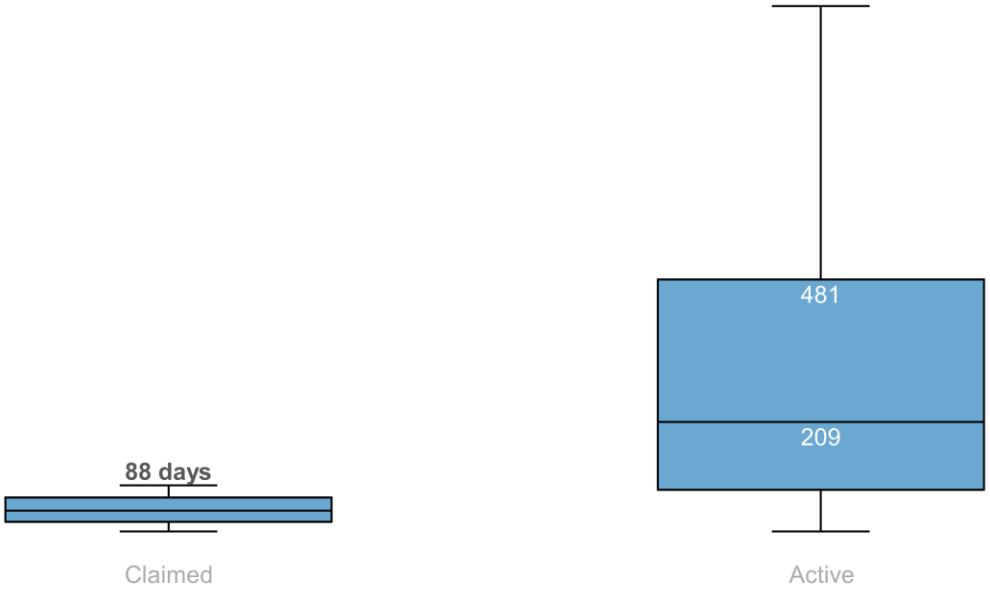
… With its City, Port Said Stands Out as the Highest-Claim Rate City

No city claims more than Port Said, which makes its product lifetime the most compelling place to look next.



Products either fail early or lasts for years.

Claimed products rarely survive 3 months, hinting at a deeper quality problem.



To summarize

- **1 in 2 warranties gets claimed**, a 50% claim rate that grows with every new customer added.
- Claim rates are close, but **small gaps compound**. The **highest regions** show where **action is needed** most.
- Claimed products **fail within 3 months**. Active ones last years. An **early product failure** pattern.
- **No prior visibility. One structured analysis**. A problem quietly eroding sales, finally **revealed**.
